

In the U.S., the chance of a woman being diagnosed with invasive breast cancer in her lifetime is about 1 in 8.
– 2008 American Cancer Society

Microflex and The Breast Cancer Research Foundation® *Touching the Lives of Others*

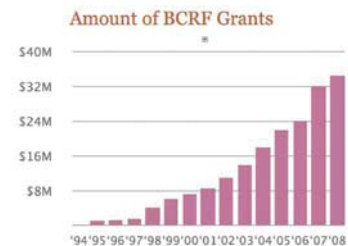

Microflex is proud to be an official Corporate Alliance Partner of The Breast Cancer Research Foundation® by making a donation from every case of *ColorTouch® Pink* sold.

The mission of the Breast Cancer Research Foundation® is to achieve prevention and a cure for breast cancer in our lifetime by providing critical funding for innovative clinical and translational research at leading medical centers worldwide, and increasing public awareness about good breast health.

A minimum of 85% of all funds raised goes to breast cancer research grants and awareness programs.

BCRF has consecutively received the highest ratings from charity watchdogs for responsible and efficient use of funds.

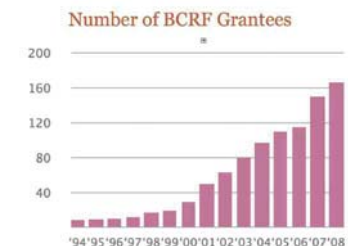

- Highest rating from Charity Navigator – BCRF outperformed 99% of over 5,000 evaluated charities in efficiently managing its finances
- Named one of the "Top Rated" cancer organizations by The American Institute of Philanthropy – the only breast cancer organization to appear on its list.

BCRF-funded research has helped save lives and significantly improved the quality of care and survivorship for tens of thousands of breast cancer patients in the past fifteen years.

BCRF grantees continue to be leaders in uncovering the clues to genetic susceptibility to breast cancer by funding:

- Collection of more than 1300 human genes related to breast cancer, an effort led by Drs. Joan Brugge and Joshua LaBaer at Harvard
- Discovery of new genetic risk markers for breast cancer, including one discovered by Dr. Kenneth Offit at Memorial Sloan-Kettering Cancer Center

BCRF has also been instrumental in the creation and ongoing support of the Translational Breast Cancer Research Consortium (TBCRC), uniting the efforts of the 15 leading breast cancer research centers in the US.
